

# Newsletter May 2018

Optimal Personalised Treatment of early breast cancer using Multi-parameter Analysis

## Recruitment update

Total recruitment is currently 443

36 patients were randomised in April and May has started well with 21 recruited already!

Well done to April's top sites—University Hospital of North Midlands (4 patients), Stepping Hill and Frimley Park Hospitals (3 patients)

**Please continue to screen and approach potential participants.**

### Screening logs

Screening log data is an important part of the trial. It gives us a clear picture of recruitment on both a site by site and trial-wide basis enabling us to focus our efforts to support you with recruitment.

Please complete screening logs for all patients identified by your MDT as potentially eligible, ER positive and HER2 negative disease, who would be offered adjuvant chemotherapy (except for those who are offered multi-parameter testing e.g. Oncotype DX) as standard of care

The OPTIMA trial office are happy to answer any queries.

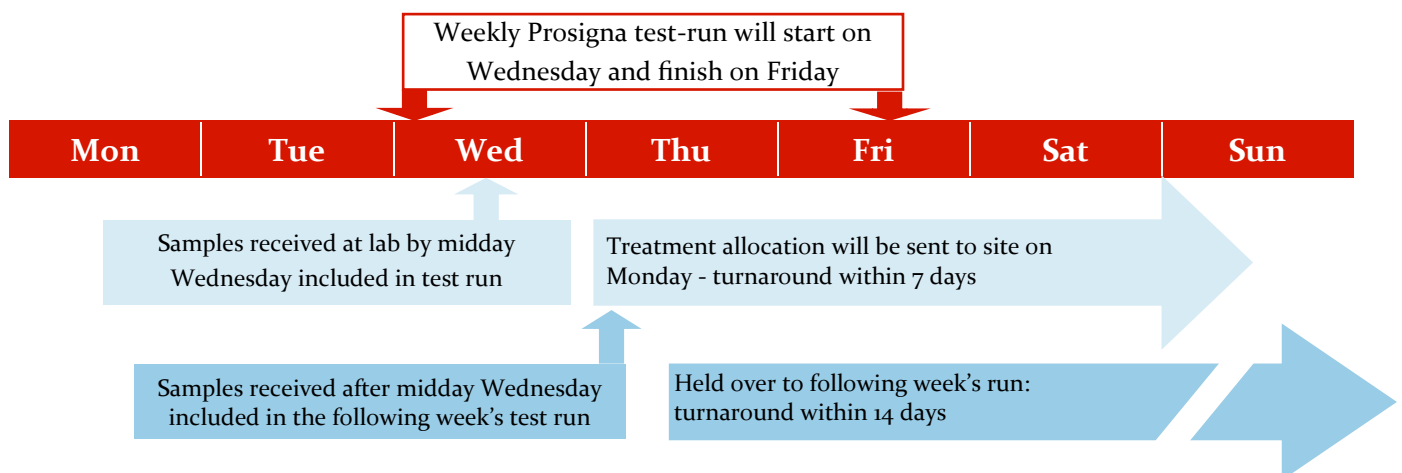

### Recruitment Tip of The Month: Use a diagram to explain the trial

Use a **diagram** to talk through the OPTIMA study arms.

The diagram will help patients to follow the possible treatment outcomes that may arise from participating in the study. Either draw it as you are explaining or use the diagram in the Patient Information Leaflet.

## Understanding the lab timetable

Whilst we are doing our best to keep to these timings there will occasionally be delays in the process. When booking a patient's chemo slots please bear in mind the possibility of a delay in treatment allocation.

Delays may be due to

- Prosigna test failure (anticipated approximately 2%)
- ER and HER2 re-testing (non luminal subtypes)
- To maintain blinding, balanced delays have been incorporated into treatment allocation for control arm patients.

# Number of patients randomised per site

Information correct as of 08/05/18

University Hospital Coventry	28	East Kent Hospitals NHS Foundation Trust	4
